

InfraThrone CoreOps (Week 1 Daily Module)

Theme: Linux + K8s Foundations for Outage Handling

Each day contains:

1. **What to Study**
2. **What to Practice (Hands-On)**
3. **Where to Study (trusted & curated)**
4. **InfraThrone Mindset Notes**

DAY 2: Debugging Linux in Production

1. Concepts to Study

- CPU starvation vs CPU throttling
- Memory leaks vs memory pressure
- Disk bottlenecks vs inode exhaustion
- Network debugging basics (ping, traceroute)
- How to interpret /var/log/messages and dmesg

2. Hands-On

Run these on your VM:

- iostat, vmstat, free -m
- dmesg | tail
- Check inode usage: df -i
- Create file exhaustion using a loop (careful)

3. Where to Study

- <https://linuxjourney.com>
- RedHat performance troubleshooting docs
- StackOverflow “Linux debugging” patterns

4. InfraThrone Mindset

“Linux rarely lies. System metrics tell a story; your job is to read that story before touching Kubernetes.”
