

InfraThrone CoreOps (Week 1 Daily Module)

Theme: Linux + K8s Foundations for Outage Handling

Each day contains:

1. **What to Study**
2. **What to Practice (Hands-On)**
3. **Where to Study (trusted & curated)**
4. **InfraThrone Mindset Notes**

DAY 4: Services, DNS, Networking

1. Concepts to Study

- ClusterIP, NodePort, LoadBalancer
- kube-proxy concepts
- DNS inside Kubernetes
- Service → Endpoint mapping
- Basics of CNI

2. Hands-On

Run commands: **kubectl get svc -A || kubectl get ep -A || kubectl exec -it test -- nslookup kubernetes.default || kubectl exec -it test -- curl <service-name>**

Break scenarios:

- Missing endpoints
- DNS resolving, but service unreachable
- IPtables mis-rules (surface understanding)

3. Where to Study

- Kubernetes official docs → Services
- “Kubernetes Networking” by Michael Hausenblas (blog)

4. InfraThrone Mindset

“70% of outages are networking. If DNS breaks, everything breaks.”

THE DEVOPS WAR ROOM
