

InfraThrone CoreOps (Week 1 Daily Module)

Theme: Linux + K8s Foundations for Outage Handling

Each day contains:

1. **What to Study**
2. **What to Practice (Hands-On)**
3. **Where to Study (trusted & curated)**
4. **InfraThrone Mindset Notes**

DAY 5: Deployments, ReplicaSets & Scheduling

1. Concepts to Study

- Deployment strategy (Rolling, Recreate)
- ReplicaSet behaviour
- Scheduler decision-making
- Pod anti-affinity (surface level)
- Node resource pressure
- Events related to scheduling

2. Hands-On

Commands: **kubectl scale deploy test --replicas=5 || kubectl get rs | kubectl get nodes || kubectl describe node <name> || kubectl get events --sort-by=.metadata.creationTimestamp**

Break scenario: THE DEVOPS WAR ROOM

- Not enough CPU
- Node taints
- Pod stuck in Pending

3. Where to Study

- Kubernetes docs → Workloads → Deployments
- KodeKloud free “K8s scheduler basics”

4. InfraThrone Mindset

“If pods are pending, don’t stare at them, stare at the node.”

THE DEVOPS WAR ROOM
